Transform Your Smile With Damon Clear For Insignia

An Insignia patient before and after treatment

Description: Smiles are a huge part of a person's identity and Americans know that, with recent studies showing that more than one-third of them are interested in improving their smile. What's stopping them from getting a better smile? For image-conscious adults, the thought of wearing a mouthful of metal can be unappealing. But now, with today's advanced orthodontic treatment like Damon® Clear™ for Insignia™, adults have the opportunity to achieve a perfect smile discretely and fast! Damon Clear for Insignia combines sophisticated 3-D treatment planning software, customized clear appliances and the leading technology of the Damon System to provide faster and more predictable results compared with traditional braces. Using a high-resolution scan, Insignia creates a precise 3-D virtual model of each patient's smile. With the digital rendering, doctors can provide the patient with a preview of what their new final smile will look like before starting treatment. And with the innovative technology of Insignia and the Damon System, adults can improve their smile in less time than traditional braces, and with less frequent visits to the orthodontist, making it ideal for professionals with limited free time. To learn more about Damon Clear for Insignia, visit www.insigniasmile.com.

Price: \$5,000.00 to \$8,000.00
